TAPASAN Mini Pipe Test Plugs are products that help test the pipeline and ensure the evacuation of the fluid in the pipeline during the temporary blinding of short pipelines. These are produced by vulcanizing SBR+NR rubber and high-strength fabrics. It is resistant to temperatures between -30°C and +70°C. Its biggest advantage is that it is ideal for testing lines where standard pipe test plugs are long and for evacuating the fluid.

*It can be produced with NBR rubber resistant to gas, petroleum and derivatives.

Product Code : KTBM

Connection Type

By-pass Design

Product Code	Size Usage Range		Max. Working Pressure (bar) / (psi)	Deflated Plug Dimensions		By-pass Size (inch)	Approx. Weight (kg) / (lbs)	Back Pressure (bar) / (psi)
